Arizona Potential Future Homes

Jaden 2023 Fall Honors Project
PURPOSE OF THE PROJECT

Arizona, a state known for its diverse landscapes and vibrant cities, has experienced significant population growth over the past few decades. I will research Arizona's predicted population growth, the organizations responsible for these forecasts, and the qualifications of those making these predictions.

From there I will make a small representation of a building plan that could possibly be integrated in the state to better fit all the new coming population.
Research (About the Population Growth)

Arizona's population is predicted to increase by 36% by 2036.

The national average population growth is expected to be 20%, making Arizona's growth nearly double the national rate.

The current population of Arizona is approximately 7.3 million people.

Arizona's population is anticipated to reach 9.5 million by 2036.
Predictions are based on demographic trends, birth and death rates, net migration, and economic factors.

The U.S. Census Bureau conducts decennial censuses and produces annual population estimates.

The bureau's predictions are authoritative, utilizing data sources such as vital statistics, immigration trends, and socio-economic indicators.

The Arizona OEO collaborates with stakeholders, including local governments, to create context-specific projections.

The U.S. Census Bureau employs demographers, statisticians, and population studies experts.

The Arizona OEO employs demographers and researchers with expertise in demography, statistics, and economics.
